

CHADARASI CHANDRA SEKHAR

DevOps Engineer

 chchsekhar2000@gmail.com |  +91 9381989587

PROFESSIONAL SUMMARY

DevOps Engineer with **3+ years of enterprise experience** specializing in automating production workflows, cloud architecture management, and high-scale container orchestration. Proven expertise in building secure, compliant **FinTech/Banking infrastructure** for high availability and zero-downtime deployments. Deep technical command over **GitOps (Argo CD)**, **Kubernetes**, and **Infrastructure as Code (Terraform)**. Highly adept at production support, slashing incident response times, and driving cost-optimization across multi-environment setups.

TECHNICAL SKILLS

- **Cloud Infrastructure:** Amazon Web Services (AWS) — VPC, EC2, EKS, S3, IAM, ALB, Route 53, CloudWatch
- **Containerization & GitOps:** Kubernetes (K8s), Docker, Argo CD, Helm
- **Infrastructure as Code (IaC):** Terraform (Remote State Management, S3 & DynamoDB Backend), Ansible
- **CI/CD & Automation:** Jenkins (Declarative Pipelines), GitHub Actions, Git
- **Artifact Management:** JFrog Artifactory, Container Registry
- **Web Servers & Networking:** Nginx, Apache HTTP Server, Apache Tomcat, Reverse Proxying (ProxyPass)
- **Security & Observability:** SSL/TLS Certificates, CSR/Key Generation, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

CLOVER INFOTECH — *DevOps Engineer*

Client Deployment: Axis Bank (FinTech Core Infrastructure) | Apr 2023 – Present

- **Kubernetes Architecture:** Designed and deployed containerized banking applications on **Amazon EKS**, shifting legacy systems into self-healing Kubernetes clusters to boost application scalability and delivery speed.
- **GitOps & Pipeline Automation:** Engineered end-to-end **CI/CD pipelines** using **Jenkins, GitHub Actions, and Argo CD**; established robust **GitOps practices** that reduced software release cycles and automated rollback workflows.
- **Production Infrastructure as Code:** Provisioned and maintained production AWS infrastructure using **Terraform**; configured scalable remote state management using **AWS S3 and DynamoDB locking** across multi-tenant teams.
- **Secure Ingress & Traffic Routing:** Architected enterprise-grade networking configurations integrating **AWS VPC, Application Load Balancers (ALB), and Kubernetes Ingress** with Route 53 for customized domain traffic.
- **Hardened Web Infrastructure:** Deployed and managed **JFrog Artifactory** on Tomcat; implemented secure **Apache ProxyPass reverse proxies** with custom-generated **CSR/Keys and SSL/TLS certificates** to enforce strict banking security standards.
- **Observability & Cost Management:** Automated production telemetry using **Prometheus and AWS CloudWatch**, cutting team incident response times by **30%** and identifying resource leaks to slash cloud infrastructure spend by **20%**.
- **Team Upskilling:** Mentored junior engineers on Kubernetes cluster deployments, Terraform code structures, and branching workflows to build a high-velocity engineering culture.

KEY PROJECTS & IMPACT ACHIEVEMENTS

-  **CI/CD Transformation:** Reduced production deployment windows by **40%** by replacing manual validation scripts with automated GitHub Actions workflows.

-  **High-Availability Operations:** Maintained a strict **99.9% system uptime** for critical banking modules through proactive alert engineering and automated incident response matrices.
-  **Secure Infrastructure Migration:** Successfully migrated core monolithic services to decoupled container clusters without single-point-of-failure vulnerabilities.

EDUCATION

- **Bachelor of Technology (B.Tech)** in Electrical and Electronics Engineering (EEE)
